A FEW SUGGESTIONS AND INSTRUCTIONS TO THE READER Now, all that is necessary to calculate the area of a farm having any number of sides is to know how only to add, subtract, multiply, and divide by short division. There is nothing hard about the calculation at all, and please don't get it into your head that there is anything difficult about it either. You know that \$7.25 stands for seven dollars and twenty-five cents, and in like manner any number such as, say 3.72 chs. on the calculation sheets means three chains and seventy-two links, or 72/100th of a chain. Each one of the above numbers is a Decimal Fraction. In fact, every time you write any sum of money of any number of dollars and cents you write down a decimal fraction. The point coming between the dollars...
