Aggregate retained on the screen is classed as coarse aggregate. kept the flames confined within the concrete walls of the structure. The fire also was prevented from entering the basement of the building and the entire stock in the basement was saved. It is just as true of concrete buildings as of other types of construction that fireproof exterior walls alone do not constitute fire-safe construction. It.is quite as necessary to have reinforced concrete floor slabs and roof slabs and some form of fireproof partitions as it is to have fireproof exterior walls, if serious interior fires are to be prevented. In this instance, as in a number of others, the slight additional cost of reinforced concrete floors and roof would have saved this company serious embarrassment. Harrison F. Gonnerman has joined the staff of the Structural Materials...
